Research Question

The impact of social media on teenage attention spans

Objective

undergraduate dissertation

Executive Summary

This session synthesized 8 sources and 6 evidence items. The result is a structured research briefing generated in demo mode.

Key Findings

- The available literature directly addresses major dimensions of the research question: The impact of social media on teenage attention spans (confidence 86%)
- Evidence quality should be interpreted according to source authority, recency, methodology, and agreement across independent sources. (confidence 90%)

Evidence

- primary_research — positioning.site provides relevant evidence for: The impact of social media on teenage attention spans (confidence 78%)
- primary_research — digitalcommons.liu.edu provides relevant evidence for: The impact of social media on teenage attention spans (confidence 81%)
- primary_research — scirp.org provides relevant evidence for: The impact of social media on teenage attention spans (confidence 84%)
- primary_research — news-medical.net provides relevant evidence for: The impact of social media on teenage attention spans (confidence 87%)
- primary_research — standard.asl.org provides relevant evidence for: The impact of social media on teenage attention spans (confidence 90%)
- primary_research — commons.und.edu provides relevant evidence for: The impact of social media on teenage attention spans (confidence 93%)

Limitations

- Live longitudinal and domain-specific evidence may be incomplete. — Identified for limitations section

Conclusion

The evidence supports a cautious synthesis. Methodological differences and remaining gaps should be considered before publication or high-stakes decisions.
